

Learning Journal Template

Student Name: Abhishek Deshwal

Course: Software Project management

Journal URL: <https://github.com/adizero99/SPM-SOEN6841-Learning-Journals>

Week 1: jan 18 - 24

Date: Jan 20 , Jan 21

Key Concepts Learned:

During this week's study, I learned about the following:

Basics of Software Project Management: Understanding the nature of software projects and challenges such as complexity.

Project Initiation and Planning: Realising the importance of project charters, project scope, and the necessity of objectives for project implementation..

Cost Estimation and Scheduling: Learning about the factors influencing project cost estimation, the importance of scheduling, task duration, and dependencies for efficient project management.

Peer Interactions:

Interacting with peers provided a valuable platform for exchanging ideas and insights, further helping my learning experience. I talked about the budget model especially how it is going to help us in terms of planning the project.

Challenges Faced:

Learning about these complex subjects was insightful but little complex, helping me learn a lot about the management side.

Personal Development Activities:

I went through additional research and case studies to get a clearer idea about the whole prospect of project management.

Goals for Next Week:

Looking ahead, I aim to further add to my understanding of software project management, with specifically applying these concepts to projects I would work on. I also plan to expand my learning into new areas, continuing to get further clarity in software project management.
